and Joint Venture Partners

Subject: **Preview of I/A Series SMART™ (System Monitoring and Reporting Tool)**

Improve the functionality and performance of I/A Series systems with I/A Series SMART™. SMART is a new software application developed jointly by Invensys and Smartware Technologies, that will soon be available as an option for your I/A Series Projects, offering enhanced data, trending and reporting features. You are invited to join us for a WebEx to get a preview of I/A Series SMART on Tuesday, September 21, 2004 at 10:00 A.M. CDT.

I/A Series SMART provides a series of applications that allow you to offer unique features and benefits for the I/A Series that many competitors are unable to provide. Designed to improve your ability to monitor and maintain I/A Series projects, SMART provides the ability to **automatically** monitor station status, collect data, schedule backups, and generate reports on any UNC or Enterprise Server. I/A Series SMART is a powerful data gathering and reporting system that can be configured to meet a variety of requirements.

Here are a few examples:

- I/A Series SMART can **automatically** backup a stand-alone UNC every night into an XML file and send it to a separate FTP server used to store archives.
- I/A Series SMART can **automatically** collect the latest records from various logs and download them to a local database, where customizable Excel reports of trends, errors, alarms, or other important information can be created.
- Use I/A Series SMART to **automatically** email reports to service technicians or customers where it will be waiting for them to view in the morning to confirm health and status of the system and to show trending data and resource usage.

I/A Series SMART will be available by the end of September, but you can get a preview of the tools by joining a WebEx session. The WebEx will be conducted on Monday, September 21, 2004 at 10:00 A.M. CDT. You will be given a quick overview I/A Series SMART and how it can be applied to enhance your projects as well as details on the upcoming release.

Existing WorkPlace Pro Utilities Users:

As part of the original TIP offering (See Announcement 03-33) existing users of WorkPlace Pro Utilities are eligible for a free upgrade, which includes the functionality of I/A SMART. The updated version, WorkPlace Pro Utilities 2.0 can be downloaded now from the Smartware site (www.smartwaretech.com) and can be used as your office demo or for remote service with support for one Enterprise Server and 2 UNCs.

What: I/A Series SMART Preview

When: Tuesday, September 21th @ 10:00 CDT

To participate in the WebEx session, you will need to go to: <http://invensys.webex.com/>. Select the meeting titled "I/A Series SMART Preview" and click the "join" button. Once you select and join the meeting, you will be prompted to enter your phone number for a call back from WebEx. This will connect you to the audio portion of the session.

If you have not used WebEx before, make sure you connect to the meeting 5-10 minutes before it is scheduled to start to allow the WebEx plug-in to install properly.

Note: You do not need to request a WebEx account to participate in this session.

If you have questions or comments, please contact me at brad.stradtman@invensys.com.
